

The list below represents the most popular makes and models of cars that the HandiRack is compatible with.

For further information and advice, please visit the FAQs section of the website or alternatively please send us an email info@handiworld.co.uk.

Roof Width

The HandiRack is designed to work on cars to a maximum roof width of 145cm.

Airbags

Like all 'soft' or 'temporary' roof racks, the HandiRack uses a strap that passes through the cabin of the car which may cover airbags located under the window frame. The HandiRack will not cause the airbags to deploy during normal driving conditions.

Panoramic Roofs

It's fine to use the HandiRack on a panoramic roof. Please just check the load capacity. This information is normally found in your car's handbook.

Factory Fitted Parallel Roof Rails

There are two type of parallel roof rails. Those that sit flush on the roof (no gap) and those where there is a gap between the roof and the rail. The HandiRack works with both types.

2 Door Cars

We recommend that both sets of bars are placed across the front doors. To maximise the distance between the bars, we suggest that the V flaps are secured to the underside of the HandiRack using the Velcro pads.

If your car has rear opening quarter light windows, then the rear set of bars can be attached by passing the fitting strap through the windows.

Rear Sliding Doors

Please contact us for some useful tips as to how the HandiRack works with rear sliding doors.

Frameless Windows

Some cars such as BMW Minis and coupes feature frameless windows. The HandiRack works fine with these models.
